A MESSAGE FROM OUR PRESIDENT

Dick Pippen
Rpippen@comcast.net

Greetings Orchid Lovers—like our orchids in Nature we must learn to adapt. That is what we are forced to do during this unusual year. Normally the first Thursday in November we would have our regular monthly meeting and, following our by-laws, that meeting is considered our "required" annual general meeting at which officers and board members are elected. Well, with the COVID situation we will not be having our November monthly meeting in the usual sense, but rather at some point in the month of November we will have a sort-of-virtual meeting (but not Zoom). Elsewhere in this newsletter appears the slate of officers and directors selected by the Nominating Committee and approved by the Board of Directors (which appeared first in the October Newsletter). Veronica Catrombon, our Membership Chair, will be sending out an electronic ballot by email with instructions on how to vote (snail mail will be used for those who do not receive email). Please follow the instructions and vote for your 2021 Officers and Board Members. Thanks for your cooperation, and thanks to Veronica for her creativity in this project.

Details are still being worked out regarding getting a Holiday Orchid to each of our members. Stay tuned as we learn more about this project.

This is about the time of year, as the rainy season draws to a close, that our Catasetums "think" about their dormancy period. As I looked out my window onto the pool cage this morning (mid October) I saw *Catasetum* Penang was not ready to "give up the ghost," but was blooming for the third time this season, putting on a very nice display. Typically, this hybrid has much darker flowers but my plant, as you can see, has lighter colored flowers. *Ctsm*. Penang is a cross between *Ctsm*. Susan Fuchs and *Ctsm. piliatum*. It has won two awards and has been used as a parent in 21 crosses. The cross was originated by Ooi Leng Sun of Malaysia and registered by him in 1989 (he lives in the province of Penang in Malaysia). It is appropriate that it is in bloom now, coinciding with the publication of the AOS Special Publication on Spots and Stripes, distributed to AOS members along with the October issue of Orchids. That booklet has a very nice article by Fred Clarke on spotted Catasetinae. If you are not an AOS member and like Catasetums you should borrow a copy. There are also excellent articles on spotted Cattleyas and Vandas as well as other genera.

Please stay safe and healthy and, as always, keep your orchids happy!

Dick

CARE AND CONCERN:

A get well card was sent to NOS member and AOS Judge David Junka.

TREASURER'S REPORT

Submitted by Sheila Demkovich

Regions bank checking account balance is $18220.93 as of September 31, 2020.

NOS Governance for 2021

The following members have been nominated as the NOS Governing Board for 2021.

This slate first appeared in the October 2020 newsletter.

An eblast will be sent on November 1, 2020, so that each member may vote.

For those members who receive this newsletter via USPS, a ballot with instructions will be enclosed.

Please direct any questions to Dick Pippen, President, rpippen@comcast.net.

President: Richard Davenport
1st Vice-President: Jim Rawson
2nd Vice-President: Lanelle Bishop (with Carolyn Booker assisting)
Treasurer: Sheila Demkovich
Secretary: Cynthia Bock
Publicity: MaryJo Shively
Newsletter: Kris Morton (& Veronica Catrombon non voting)
Membership Chair: Diana Genotti
1 year Director: Rae Jean Walker
2 year Director: Nancy Kier
3 year Director: Carolyn Booker
AOS Representative: Marilyn Moser
Webmaster: Susan Roehl

Past President: Richard Pippen (non voting)
Education Chairman: Kit Kitchen-Maran (non voting)
2021 Orchid Show Chairman: Jim Rawson (non-voting in this position)

MEMBERSHIP CHAIR REPORT

Submitted by Veronica Catrombon

Current Members: 185 **New Members for 2020: 41**

Membership dues will be accepted beginning November 1, 2020 for the year 2021. Our Membership year runs from January 1 through December 31.

You may pay by **check** mailed to Naples Orchids Society, PO Box 7998, Naples, FL 34101,
or by **credit card** at https://naplesorchidsociety.org/join-us/

NEW RATES for 2021: Single membership $20, Family membership $25

TASKS FOR NOVEMBER

From Florida Orchid Growing Month by Month by Martin Motes, PhD

- Prepare for cold.
- Reduce fertilizer.
- Apply extra potassium & magnesium.
- Segregate dormant genera in bright dry area.
- Repot plants after flowering.
- Groom Plants & flower spikes for holiday display.

FROM MARTIN MOTES OCTOBER MONTHLY NEWSLETTER

Although overall this September has been wetter than usual, the pattern of rain fall has been particularly fortunate. Early September was exceptionally dry, offering our plants welcome relief from the mounting disease pressure of an overly wet year. Whether by intent or simply by benign neglect, if your orchids were dried thoroughly early in September, they were better prepared for the onslaught of heavy rain, mid to late in the month.

The heavy rains produced by thunderstorms, were punctuated by many hours of bright sunshine, drying our plants quickly and completely. All very good news. Now, with the month also ending on a slightly drier note, our plants are better positioned for early October rains. Continue to err on the dry side, as October can be capricious and unpredictable in terms of rainfall and tropical disturbances are still also always possibly in the cards in this transitional month. The wild card in the deck, now, is that global warming may extend the rainy season later into the fall just as it appears to have cause its early initiation this year. Days are much shorter now, water carefully, if at all, and consider an additional application of the fungicides recommended in Florida Orchid Growing .

Snails have been enjoying the extra rain as well. If you have been treating for them as recommended, you may notice that they are mostly smaller, a good thing but still not to be tolerated. Snails of a fairly uniform size are indicative of a fresh hatch out, emphasizing the need to apply snail bait lightly but frequently across the rainy season. One more light application of snail bait should do for this year.

The extra rain and high humidity have kept mites at bay but the periods of hot bright weather have allowed some emergence of thrips. Scout for them early in the morning and pay close attention to the new roots of vandas. The new edition of Florida Orchid Growing has an extensive new chapter on Thrips and the latest information on their control.

The extra heavy rains have flushed fertilizer from our plants which is not a bad prospect for those genera which will shortly be going dormant but for our vandas which are still growing strongly, not so much. When a bright patch of weather allows, give those vandas a shot of low phosphorus liquid fertilizer, Michigan State formula or comparable, and they will reward you with an abundance of bloom for the holidays.
If you are growing your Phalaenopsis indoors in air conditioning, remember to put them outside later in the month to catch the first temperatures that drop into the fifties, so they initiate spikes. Once you see the emerging flower spikes you can move them back inside.

DO YOU HAVE BLACK ROT?
From AOS

Drenches of a protectant fungicide such as Truban or Terrazole are recomended if disease is diagnosed early. For more advanced cases, a systemic fungicide such as Aliette or Subdue is more effective. Captan, Dithane M-45 and Physan 20 have also been recommended by some growers for control of black rot.

FEATURED ORCHID TYPE FOR OUR NOVEMBER 2020 NOS ISSUE:
--- BULBOPHYLLUM CULTURE ---

Temperature:	Most ***Bulbophyllum*** species are warm growing and should see a winter temperature of no less than 65 F at night. Species from more temperate regions can be grown 5-10 degrees cooler. Maintain a gentle air movement.
Light:	Moderate to bright (2000 to 3500 foot-candles). Higher light, that does not damage the leaves, seems to result in better and more frequent blooming.
Water-Humidity:	Most species come from humid rain forests. Humidity should be kept at 60% , which can be difficult to do outside of the greenhouse. Water frequently, as both mounted (at least daily) and potted plants (several times a week) will thrive under wetter conditions than most orchids. Bulbophyllum may be the exception to the rule "when in doubt, don't water". Species from more temperate regions often have a dry period, and watering should be adjusted accordingly.
Fertilizer:	Use a balanced fertilizer at quarter strength once a week during the summer. This can be reduced to once a month in the winter.
Potting:	***Bulbophyllum*** species tend to prefer a minimum of repotting. Mounting (tree fern or cork slabs), well draining baskets, and pots can all be used successfully. The recommended potting media are sphagnum moss, coir (coconut chips or fibers) and tree fern. The choice of potting will often be dictated by the very long rhizomes of some species.

April, 2020

Dear Orchid Friends,

Our Gala Centennial Celebration is just a year away! Our campaign to raise funds for conservation is well underway, we want to thank everyone who has contributed so far. Remember, the profits for this event go directly to our permanent Conservation Fund endowment, to help preserve threatened orchid habitat around the world. Protecting the habitat protects more than the orchids, too – all of the other plants and all of the critters will benefit!

There's still time to participate. Please review the sponsor opportunities flyer and send your contribution today!

The Gala is scheduled for April 10, 2021, at the fabulous, historic Biltmore Hotel in Coral Gables, Florida. Individual tickets to the banquet can be reserved, see the flyer for details.

That weekend will also include our Spring Members' and Trustees Meeting, with many activities and a fantastic auction as well. Proceeds from the auction also benefit the Conservation Fund endowment. The Biltmore Hotel has given us a very special room rate for this event. Use booking ID code 321 when you make your reservation. You can contact the hotel by phone, toll-free number (855) 311-6903 or on their website: https://www.biltmorehotel.com/

On behalf of the entire Centennial Committee, we want to thank you in advance for your support of the American Orchid Society. With your help our organization will continue to grow. Enclosed please find an information page about donor and sponsor opportunities. Please don't hesitate to contact me for additional information.

Very Truly Yours,

Robert Fuchs
Vice President
American Orchid Society
Centennial Committee Chair

American Orchid Society

AOS Centennial Celebration is coming! April 7th - 10th, 2021

Our 100th anniversary is just 9 months away. It will be held at the historic Biltmore Hotel in Coral Gables, Florida. The celebration will also include our 2021 Spring Members Meeting which will include fabulous activities, renowned speakers, and a great auction, with its proceeds earmarked for the Conservation Endowment fund. You can become a sponsor of this momentous event by making your contribution at www.aos.org/donate and selecting "Centennial Celebration Fund" from the Distribution drop-down list.

Check out the Biltmore's website here and view this gorgeous venue: https://www.biltmorehotel.com/

We have contracted a special room rate for this event. Use booking/contract rate code 321 when you make your reservations directly with the hotel at (855) 311-6903.

On behalf of the Centennial Committee, we want to thank you in advance for your support of the American Orchid Society. With your help, our organization will continue to grow and fulfill our mission of orchid education, conservation, and research.

Education Update

Kit Kitchen-Maran
Education Chair and Past President

Update on the Samples of Goodyera repens

Last month I wrote about sending samples of Goodyera repens roots and seed capsules from Alaska to Dr. Larry Zettler at Illinois College so that perhaps the mycorrhizal fungi for this plant could be identified. Well, great news! Dr. Zettler sent this photo of the petri dish in which the fungi were isolated from the roots. He says, "the most prevalent fungus that we see in the plate displays a classic 'snowflake' pattern, many of which turn out to be members of the genus Tulasnella." He goes on to say, "This would not surprise me for Goodyera. We also have the seeds being desiccated for storage. If we try to germinate the seeds with some of the fungi, we'll probably need to expose the seeds to a simulated winter (cold-moist stratification). We still need to inspect the seeds for embryo viability first, however. So we're making progress."
In a mid-October, follow-up email, Dr. Zettler further states that Hannah Baker, his student, has successfully isolated what appears to be Tulasnella.

You may have met Hannah who interned at the Naples Botanical Garden last year and attended our July meeting with our other interns from Illinois College, Michael La Russo and Jack Lu, who repeated their studies and data gathering this year on the Ghost Orchids in the Florida Panther National Wildlife Refuge.

Zettler also said, "we're going to retain a few strains (of the fungus) in the permanent NAOCC (North American Orchid Conservation Center) collection. I examined the culture under the microscope and it's a keeper. We may try to inoculate seeds with the fungus eventually." (See next page for the *Orchid Root Sample/Fungal Isolation - Final Report)*

Speaking of snowflake patterns and simulated winter, no need for simulation here. Winter has come to Fairbanks with temperatures from zero to the warm teens and twenties, and just this week we have had our first snowfall that has covered the ground with four to six inches of the crunchy, crispy white stuff. So we probably won't see the grass and other green stuff for another six months until break-up and green-up. Right now we are going into freeze-up. Stay well and safe and warm, or…, cool… -Kit-

Do You *Smile* When You Order From Amazon?

If you order from Amazon, did you know that you could also support Naples Orchid Society with your purchase at no cost to you? Go to **smile.amazon.com,** it's the same company, same prices, same account and same everything, except Amazon will let you name a non-profit organization and donate 0.5% to it. NOS has already been registered and linked, but you will need to go to this website and name us as the organization you have chosen for the donation to go to. Remember to go to smile.amazon.com to order using your same account login and password for your Amazon account. Bookmark it so you will have a reminder. And **THANKS** for supporting your Society!

ILLINOIS COLLEGE

North American Orchid Conservation Center

ORCHID ROOT SAMPLE/FUNGAL ISOLATION - FINAL REPORT

NAOCC Sample Code	2020-R-FLGA004-001
IC Sample Code	**IC-2020-NAOCC-7**
Orchid's Scientific name **Variety** (if applicable)	*Goodyera repens*
Common Name	Dwarf Rattlesnake Plantain
State/County	Alaska/Fairbanks North Star Borough
Site Name (if applicable)	[redacted]
Sender(s)	Kit and La Raw Maran
Date Received at Illinois College	10 September 2020
Date Roots Processed	14 September 2020
Condition of Roots Received (1 = poor; 5 = excellent)	5
Number FIM Plates Prepared	35, from 6 root segments
Number FIM Plates w/Pelotons	10
Technician(s) Involved	Lawrence W. Zettler Hannah Baker
Comments	This was a good collection, perhaps our first from Fairbanks, and one of the few from *Goodyera*. Quite a few root segments had viable pelotons and we recovered several promising fungal candidates in both major genera and from a single root segment which was unusual. Both have been retained for permanent storage as **NA82** (*Ceratobasidium*) and **NA83** (*Tulasnella*). --Lawrence W. Zettler

FROM AOS "GROWING ORCHIDS' MONTH-BY-MONTH CHECKLIST--NOVEMBER

by Robert M. Scully Jr.

- Organize plants so that all are exposed to optimum light levels. Be wary of insects. Be vigilant & turn leaves to look for pests. Eradicate them quickly when they are found.
- Re-tie each cattleya to support the newly produced growths. Position cattleyas with the lead (newest growth) facing the direction of the principal light source. New growths of *Cattleya skinneri* may already have some dried sheaths; do not remove them.
- Observe emerging phalaenopsis inflorescences (casually referred to as spikes) between the lower leaves near the base of the plant. As these spikes push upward, carefully guide them out from the leaves; do this using a stake or even a straw because it will not take much to adjust the spike's direction. When the inflorescence is about 10-12" tall, insert a permanent stake. Tie the spike to it loosely for directional guidance & support. This same tie can be gradually moved up the stake (to about 12") as the spike lengthens. Always keep the string's point of contact with the spike at least 4" below the growing tip. Additional ties will likely be necessary as the spike elongates. Do not move the plant during the period of spike development; changing the plants orientation to its light source will cause the spike to twist.
- Position vandas to receive maximum available illumination; hang them above cattleyas.

FUN ORCHID FACTS

From Fairchild Tropical Botanical Gardens

- Orchids are the largest family of flowering plants. They have also been around the longest as they are one of the oldest flowers in existence. Since varieties of orchids are found all over the world, it's accepted that orchids were in existence prior to the separation of the continents.
- There are more than 25,000 documented orchid species throughout the world. This means the number of orchids on the planet is four times the number of birds and four times the number of mammals! That's a LOT of orchids!

ORCHIDIST'S WORD OF THE MONTH

mealybug (MEE-lee-bug)

A group of sucking insects commonly found in the leaf axils and along the inflorescences of orchids, characterized by white elliptic bodies.

Also known as unarmored scale.
(Photos at right show insects on plants other than orchids.)

An Orchid Vignette—A Neglected Potinara

Contributed by Dick Pippen

I had a neat little orchid in bloom in September that unfortunately has no name. No, it is not a "NOID" from a lost label, but a hybrid that was never registered. The cross is known. It is *Slc.* Tangerine Jewel x *Lc*.Wayndora x *Blc*. Erin Kobayashi. Wow, what a combination. When an orchid hybrid is created by combining members of three or more genera, producing an "unpronounceable" name, the plant is placed in a man-made genus named after an "important" orchid "notable. Thus in this case, if the plant was registered it would be a *Potinara*, named after a guy, Potin and an "ara" was added to his name. Unfortunately, even though he may have been an "orchid notable" I have not been able to find any information regarding Mr. or Ms Potin.

Ok, back to the plant in question. I received this from Jade Orchids as a bareroot division in 2015. I potted it in a 4" plastic pot in a bark mix and in 2019 moved it up to a 6" pot in bark mix. It has bloomed regularly every September for me and in 2020 it produced two 2-flowered spikes. Being an unregistered cross, it obviously has earned no awards, not parented any kids.

Two of its parents are well know hybrids. *Slc*. Tangerine Jewel (*Cattleya* Little Beamche X *Cattleya coccinea*) (formerly *Slc*. And *Sophronitis* respectively) was created and registered by Richella Orchids of Hawaii in 1978. It has earned two AOS awards and has been a parent in 132 crosses. The photo right of Tangerine Jewel is "borrowed" from OrchidWiz.

Rlc. Erin Kobayashi (*Rhyncholaeliocattleya* Meditation X *Rlc.* Waikiki Gold) (formerly *Blc*.), photo left, was created and registered by W.C. Chang of Hawaii in 1980. This hybrid has received 6 AOS awards and been used as a parent in 142 crosses. It and its parent, *Rlc*. Waikiki Gold, have always been favorite orchids of mine.

The third parent, *Cattleya* Wayndora (*Cattleya* Terry Wayne X *Cattleya* Fedora) (formerly *Lc*.) was created and registered in 1962 by Ernest T. Iwanaga of Hawaii. It has earned no awards but has been a parent in 25 crosses. The photo, right, is borrowed from OrchidWiz, and though a very pretty flower apparently it had "little influence on our plant in question.

If I were to register this hybrid my first choice would be *Pot*. Daffodil, but since that name in a couple of other related genera, I would call it *Pot*. White Peach 😊.

THE TURTLE CLUB

In 1999, The Turtle Club opened on the grounds of the Vanderbilt Beach Resort, transforming the landscape of waterfront dining in Naples. Specializing in fresh seafood, fine steaks and chops served in a spectacular beachfront setting, the restaurant quickly became a favorite "secret spot" for local Neapolitans. The secret has been out for some time now, and the restaurant consistently has been voted the area's top restaurant for waterfront dining. With a focus on casually elegant fine dining, hospitable and caring staff, and outstanding food and wine, The Turtle Club wins rave reviews from loyal locals and out-of-state newcomers.
